## Subject: Naloxone First Aid V1 July 2025

---

This TBT is a refresher on the stated subject, SOPs, when working for TSO and or any other role, employed by TSO, subcontracted to, or on behalf of our customers and clients as agree with by TSO. Please read and acknowledge this instruction as part of your Als, then confirm acceptance of this sop and or information briefing.

Thanks, in-advance Dave Pattinson

### TBT Naloxone First Aid V1 July 2025

When you arrive on site, to a first aid scene Danger, Response, Airway, Breathing and circulation, as per your up to date first aid training. Carry out a risk assessment, However: its always 999 and ask for emergency help, then carry out performance as per medical professional help. Even if Naloxone trained, or first aid trained, inform 999 you carry and trained to issue Naloxone, if instructed to not issue. **DON'T** if instructed to do so, carry out as per professional INSTRUCTION, only...

Recorded everything as per site instructions.

Full incident report, that's located on the rear of the venue log book.

Ensure the used needles are correctly disposed of safely, any details of witnesses, attending emergency services, to be recorded. Venue DPS, POC Duty Manager to be also informed for their local records.

**YOU MUST IN A POLIET RESPECTFUL MANNER, REQUEST TO SEE AND CHECK THEIR ID, THEN WRITE THEIR NAMES AND COLLAR NUMBERS IN THE VENUE LOG, WITH DATES AND TIMES ETC. This is mandatory, even if you get a negative response, be nice, polite and professional.**

See attached TBT bullet points for quick guide.

# Naloxone treatment process

Unconscious/unresponsive person discovered

Call 999 and follow instructions from call handler  
Advise you have Naloxone with you.

If advised to, open Naloxone by twisting, take protective cap of syringe and attach needle. Push through clothing on thigh to administer dose.

If Naloxone is administered the person may come round very quickly and confused – they may strike out. Take a step back and observe.

If person comes round and refuses the Ambulance, it may be necessary to call the Police as a safeguarding issue. It is still possible to overdose once Naloxone wears off.

## **When paramedics arrive tell them:-**

- how long the person was unresponsive
- what types of substances were used (if known)
- how many doses of Naloxone have been given

### **Breathing normally means:-**

Taking 12 or more breaths per minute. Breathing on their own. No abnormal or unusual breath sounds.

### **Naloxone is:-**

Is not harmful and has no effect if opioids are not involved. Always give naloxone if you're not sure it is drug poisoning. Once breathing normally do not give any more Naloxone.

### **Responsive means:-**

Awake and alert.  
Responds to questions.  
Easy to wake up.

### **Dyskinesia causes:-**

The person to have involuntary and uncoordinated muscle movements.

### **Naloxone:-**

Sometimes more than one dose is required. Naloxone lasts anywhere between 30 to 120 minutes in the body. Therefore, it is still possible to overdose again once this wears off.

### **Fentanyl induced muscle rigidity causes:-**

The airway to narrow or close  
The muscles in the jaw, throat, chest and abdomen to become stiff.

### **Training TBT Programme**

Tactical Security Options Ltd is a responsible employer and we take our obligations to our staff very seriously. This is why we have set out this tool box talk for the above subject. Please ensure you read and understand this TBT, any questions ask your line manager and put it in writing by the use of email to [alan@tacticalsecurityoptions.co.uk](mailto:alan@tacticalsecurityoptions.co.uk) and cc the email to the following members of management.

[dave@tacticalsecurityoptions.co.uk](mailto:dave@tacticalsecurityoptions.co.uk) and [stacey@tacticalsecurityoptions.co.uk](mailto:stacey@tacticalsecurityoptions.co.uk)
